

CrossOver Series Locks

Smart, simple and secure

CrossOver X45

To operate, just touch an iButton and/or enter a combination

CrossOver X25

To operate, just touch an iButton and/or enter a combination

Weatherproof CrossOver Series locks are controlled by our easy-to-use AccessPilot software. That means you can:

- Replace a ring of keys with just 1 iButton (right) or numeric code.
- Re-key the locks in seconds.
- Give hundreds of users individual access by the day or by the hour.
- Track who uses the locks and when they are used.
- Use the software with 64-bit and 32-bit Windows operating systems.

How you can use CrossOver Series Locks

- Allow employees access to a location by particular hours in a day, days in a week and even dates on a calendar.
- Give repairmen one-time access to your facility or access only on the dates and at the times you specify.
- Track who used the lock and when they used it—even track failed attempts to open the lock.
- iButtons can be reassigned easily and disabled if lost: Instant security without the need to call a locksmith to re-key the lock and purchase new keys.
- Perfect for dim areas or for the elderly or disabled. The X45 operates with just a tap of the iButton, and the spot where it should be tapped is lit by a small red LED.

Also available...

CrossOver Doorstrike Controller

CrossOver X15 for lockers, cabinets, etc.

Both of these locks also use AccessPilot software!
